

Problem Set for 3rd March 2025

Exercise 1 Here is the composition rules for linear maps $U \xrightarrow{f} V \xrightarrow{g} W$. Show that

1. if f and g are linear injections, then so is $g \circ f$;
2. if $g \circ f$ and g are linear injections, then so is f ;
3. if f and g are linear surjections, then so is $g \circ f$;
4. if $g \circ f$ and f are linear surjections, then so is g .

Exercise 2 Assume you can prove the following isomorphisms yourself:

$$\Phi : \text{Hom}_{\mathbb{F}}(U_1, V) \times \text{Hom}_{\mathbb{F}}(U_2, V) \rightarrow \text{Hom}_{\mathbb{F}}(U_1 \times U_2, V)$$

$$(f_1, f_2) \mapsto \begin{bmatrix} U_1 \times U_2 & \rightarrow & V \\ (u_1, u_2) & \mapsto & f_1(u_1) + f_2(u_2) \end{bmatrix},$$

and

$$\Psi : \text{Hom}_{\mathbb{F}}(U, V_1) \times \text{Hom}_{\mathbb{F}}(U, V_2) \rightarrow \text{Hom}_{\mathbb{F}}(U, V_1 \times V_2)$$

$$(g_1, g_2) \mapsto \begin{bmatrix} U & \rightarrow & V_1 \times V_2 \\ u & \mapsto & (g_1(u), g_2(u)) \end{bmatrix}.$$

Show that

1. $\Phi(f_1, f_2)$ is an injection, only if $(\Rightarrow)$ f_1 **and** f_2 are injective;
2. $\Phi(f_1, f_2)$ is a surjection, if $(\Leftarrow)$ f_1 **or** f_2 is surjective;
3. $\Psi(g_1, g_2)$ is an injection, if $(\Leftarrow)$ g_1 **or** g_2 is injective;
4. $\Psi(g_1, g_2)$ is a surjection, only if $(\Rightarrow)$ f_1 **and** f_2 are surjective;
5. **(Optional)** Find counterexamples for converse statements.

Exercise 3 (optional) We know that the composition map

$$B : \text{Hom}_{\mathbb{F}}(V, W) \times \text{Hom}_{\mathbb{F}}(U, V) \rightarrow \text{Hom}_{\mathbb{F}}(U, W)$$

$$(g, f) \mapsto B(g, f) := g \circ f$$

is $\mathbb{F}$ -bilinear. Show that

1. if g is injective, then $B(g, -)$ is an injection;
2. if f is surjective, then $B(-, f)$ is **still** an injection;
3. if g is surjective and V is coflasque, then $B(g, -)$ is surjective;
4. if f is injective and V is flasque, then $B(-, f)$ is surjective.

Definition

- Say Y is flasque, if any linear map on its subspace $Y^{\text{sub}} \rightarrow X$ extends to $Y \rightarrow X$.
- Say Y is coflasque, if any linear map on its quotient space $X \rightarrow Y^{\text{quot}}$ extends to $X \rightarrow Y$.
